

Mistletoe Therapy in Cancer Treatment

**Latest Research
Clinical Possibilities
Prescribing Practicalities
Case Presentations and Discussion**

Thursday February 6th 2014 (Waitangi Day)

9am-5pm

Helios Integrative Medical Centre
275 Fifiel Terrace
St. Martins
CHRISTCHURCH

Mistletoe (*Viscum album*) has proven beneficial in limiting cancer growth and lengthening survival time, improving quality of life and mental outlook, along with increasing tolerability to conventional cancer treatments. Mistletoe therapy is used by over 60% of doctors within German speaking countries for their cancer patient's care and its benefits are supported by extensive research and clinical experience. Dr. von Laue's workshop will address:

How to choose effectively among available preparations
Efficacy and safety of use with your cancer patients
Phases of Treatment and Monitoring
Discussion and Questions

Hans-Broder von Laue MD is one of the founders of the Öschelbronn anthroposophic hospital in southern Germany, a multi-disciplinary center for cancer treatment and cancer-related emergencies. A graduate of the University of Berlin and University of Tübingen, Dr. von Laue's clinical work over 4 decades has included general practice, pediatrics, developing into specialisation in cancer treatment and oversight of an outpatient oncology program. He is active in clinical research and publishes on cancer biology and cancer treatment.

Registration Details:

Name:.....Profession.....

Address:.....
.....

Phone:.....Email.....

Registration closes Friday January 31, 2014

Conference Fee: \$160, incl teas and lunch

Early bird registration before January 11: \$135

CME points applied for
